

Assignment: Create a Personal Resume or CV in HTML

Objective:

Create a simple **Resume** or **Curriculum Vitae (CV)** webpage using the HTML elements and structure learned in **Session 1**.

Requirements:

- Use basic HTML tags to structure your resume.
- Apply **semantic HTML tags** to organize the content into sections (e.g., <header>, <section>, <footer>).
- Include appropriate headings, paragraphs, and lists to display your information.
- Use the tag to add a profile picture (optional).
- Ensure that the resume includes the following sections:

Content to Include:

1. **Header Section** (<header>)
 - Full name (use <h1> for the name).
 - A brief professional title or description (e.g., "Web Developer").
 - Optional: Profile picture (use the tag).
2. **Contact Information Section** (<section>)
 - Phone number
 - Email address
 - LinkedIn or personal website (use <a> tag to link to the website).
3. **Education Section** (<section>)
 - List your degrees or certifications.
 - Use an **ordered list** () to list educational qualifications in chronological order.
4. **Experience Section** (<section>)
 - List your work experience.
 - Use an **unordered list** () for each job experience.
 - For each job, include:
 - Job title (use <h3> or <h4>).
 - Company name.
 - Dates worked.

- A brief description of responsibilities.

5. **Skills Section** (<section>)

- List your skills in bullet points (use an unordered list).

6. **Footer Section** (<footer>)

- Include a closing remark or statement (e.g., "References available upon request").
- Optional: Social media links or personal portfolio.

Instructions:

1. Create a new HTML file called resume.html.
2. Use proper semantic HTML tags (<header>, <section>, <footer>) to structure your resume.
3. Add your content to each section based on the example structure provided.
4. Make sure your resume looks clean, organized, and easy to read.

Submission:

- Submit the HTML file (resume.html) to your Github repository and google classroom assignment.
